Improper Fractions

Find the improper fraction for each number below:

Calculation	Working out	Answer
Example: $6 = \dfrac{?}{5}$	In the whole number 1, there are 5/5 but we have 6 so we need to multiply this by 5. We multiply the whole number by the denominator to get the numerator. $\dfrac{5 \times 6}{5} = \dfrac{30}{5}$	$6 = \dfrac{30}{5}$
$6 = \dfrac{?}{3}$		$6 = \dfrac{}{3}$
$10 = \dfrac{?}{16}$		$10 = \dfrac{}{16}$
$9 = \dfrac{?}{10}$		$9 = \dfrac{}{10}$
$9 = \dfrac{?}{6}$		$9 = \dfrac{}{6}$
$7 = \dfrac{?}{10}$		$7 = \dfrac{}{10}$
$7 = \dfrac{?}{5}$		$7 = \dfrac{}{5}$
$5 = \dfrac{?}{7}$		$5 = \dfrac{}{7}$
$9 = \dfrac{?}{3}$		$9 = \dfrac{}{3}$
